

SPECIFICATIONS ID™ 1G

The Peavey ID™ 1G, or Instrument Direct Interface is a basic, non-equalized, direct interface designed to be inserted in the preamplifier output/power amplifier input of any instrument amplifier. Although the ID 1G may be used directly off of the instrument output (electric bass/guitar), some signal loss and high-frequency attenuation will occur. The ID 1G will provide a transformer balanced send (pin 2 positive) suitable for direct input to any low-impedance mixer input.

Operation Note: Placing the ground switch in the "ground lift" position will result in ground isolation between the line out and balanced out (XLR).

SPECIFICATIONS

Height:

1.5" plus connectors

Width:

3.0"

Depth:

4.4"

Weight:

0.45 lbs. (0.2 kg)

Frequency Response:

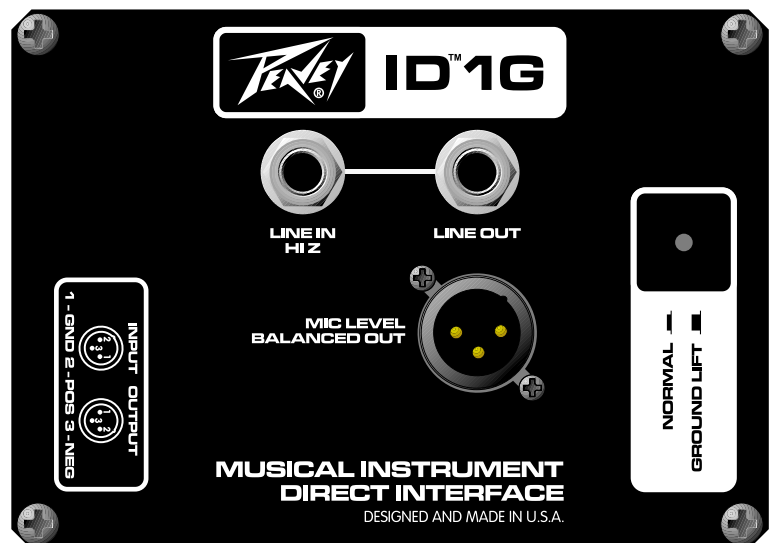

20 Hz to 20 kHz (+ - 0.5 dB)

Maximum Input Level:

+10 dBu

Overall Gain:

-20 dB
